

SOLUTIONS FOR ALL
YOUR ICT NEEDS

SQUARE
TELECOMMUNICATION

**COMPANY
PROFILE**

EXECUTIVE SUMMARY

Square Telecommunication services is a provider of ICT infrastructure and services to business in South Africa. We recognise that the value of a ICT infrastructure solution is different for every business. Our solutions are highly scalable, secure, easily managed and optimised to meet the evolving ict needs of our customers. We offer customers a broad choice of solutions, from basic business to sophisticated ICT solutions. Building on a foundation of experience in enterprise infrastructure, Square Tech focuses its efforts on Internet Protocol (IP) and the benefits IP enables through the convergence of voice, video and data over a single broadband network. These new IP based communications platforms, more recently known as converged networks, are designed to allow customers of all sizes to seamlessly implement and/or migrate in an evolutionary manner, without sacrificing any of the features or functionality of traditional systems.

INFORMATION AND COMMUNICATIONS TECHNOLOGY

ABOUT US

Square telecommunication was formed in 2019 but officially started operations in 2020 by a Sakhile Ncala to target the evolving ICT market segment. Since then we have attracted a team of young individuals who understand and focus on the importance of professionalism, integrity and customer service. These attributes have enabled us to make significant wins in the ICT space over a relatively short period of time. We position ourselves as your ICT infrastructure partner of choice, which allows our customers to deal with a single vendor, effectively eliminating the risk involved in managing multiple vendors as well as implementing, integrating and maintaining the various components of a solution of this nature. Our sales team understand that the business requirements definition and design of the solution to be implemented are imperative to the success of any implementation. We use most of our own staff to provide installations and only use sub-contractors in specialised fields, for example, electrical, generators and air conditioning.

ELIMINATING THE
RISK INVOLVED IN
MANAGING MULTIPLE
VENDORS AS WELL
AS IMPLEMENTING,
INTEGRATING AND
MAINTAINING THE
VARIOUS COMPONENTS
OF A SOLUTION.

SOLUTIONS OVERVIEW

To enable us to provide solutions that are suitable for a broad sector of enterprise customers in South Africa, we have partnered with the world's leading ISP's and manufacturers of equipment. This allows us to offer end to end solutions, which are designed and integrated by us to suit the customer's requirements. These solutions all integrate and operate with each other even though some of them are best of breed to a particular market segment.

INFORMATION AND COMMUNICATIONS TECHNOLOGY

— DATA NETWORKS

- Local Area Network
- Wide Area Network
- Wireless Network

— CONVERGED NETWORK PROVIDER

- Cabling
- Cabinets
- Raised Flooring
- Cooling
- Fire Protection
- Environmental Monitoring
- Generators

— SECURITY

- Access Control
- Surveillance Systems (CCTV)

— CLOUD SERVICES

- Microsoft Office 365
- Azure
- Amazon
- IP Phone System

— CABLING/ SERVER ROOMS

The Server Room is the environment which serves as the operating theatre for any Enterprise's network service delivery. This is the principle location for routers, Data network and Server infrastructure.

A delicate balance must be struck among the numerous elements that go into a Server Room design, including room location, physical layout, physical security, UPS systems, backup generators, power distribution, cooling & humidification systems, raised flooring, fire detection & suppression systems, access control & security and monitoring systems for all of them.

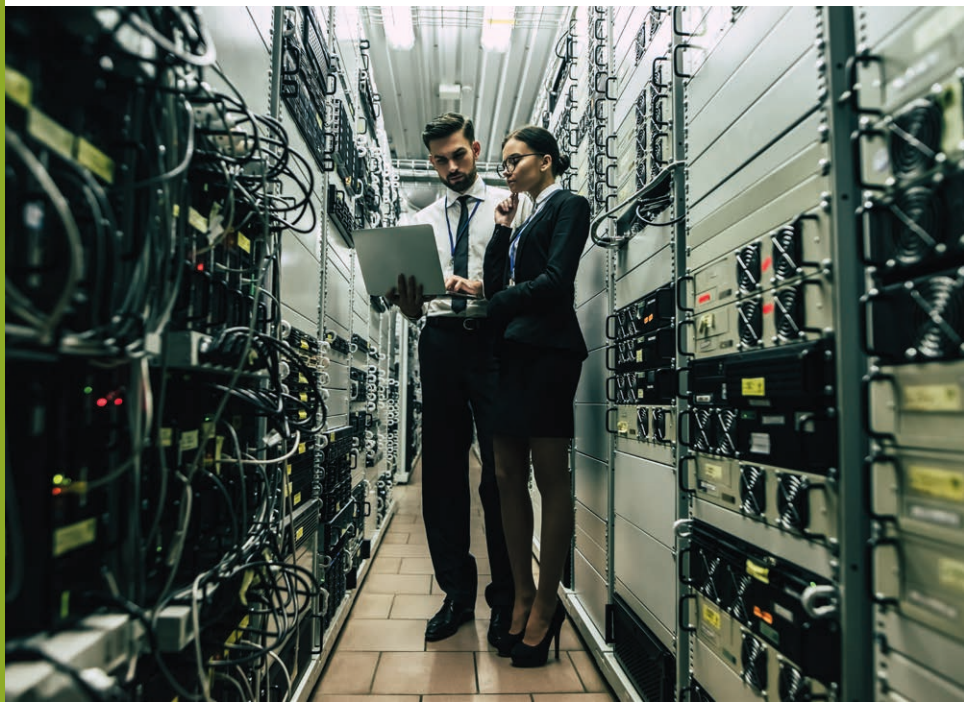

Our approach guarantees that our clients achieve scalability, flexibility and server availability within their Server Room. Our team understands that your goal is to provide continuous availability of all network services and our clients capitalise on our ability to provide optimal network solutions that fit within their time frames and budgets.

CABLING/ SERVER ROOMS

We focus on the following Cabling/ Server Room products:

- Cabling - MegaNet, Molex, Krone
- Cabinets
- Raised Flooring
- Cooling - York
- Fire Protection
- Environmental Monitoring
- UPS's - APC
- Generators

INFORMATION AND COMMUNICATIONS TECHNOLOGY

— DATA NETWORK - WAN & LAN

We recognise that the Data Network is the transport layer of all applications that a business would like to utilise for their IP Telephony, Video Conferencing, Internet traffic and their ERP systems. All of these business critical applications must run seamlessly on the corporate data network.

Those products dramatically reduce complexity and simplify ownership of enterprise networks to reduce cost.

We focus on the following networking products:

- HP Networking /Aruba
- Cisco Networking
- Dell Networking

— SECURITY

We specialize in the consulting and design, costing, installation, commissioning, configuration, integration, training, support and maintenance of:

- Access control and Asset tracking systems
- Access control systems with Time & Attendance functions
- Passive and active transponder access control systems
- Biometric and Smart card access control systems
- Integrated combinations of above systems
- CCTV monitoring and recording systems, digital, analogue, IP and HD IP
- Motion detection systems, seismic technology detection systems
- Alarm and Intercom systems
- Fire detection and suppression systems

— CLOUD SERVICES /MANAGED SERVICES AND SUPPORT

Cloud computing', cloud storage, cloud hosted - in this day and age everything has been prefixed with the word "cloud". And without a doubt, cloud-based or hosted services have significant benefits including simplified disaster recovery, always on availability and anywhere access.

Cloud can also result in significant cost savings for businesses, however, the reverse can also be true if the incorrect solution or cloud partner is selected. Selecting the right cloud partner is of critical importance as their infrastructure in essence, becomes your business's infrastructure - so downtime on the cloud provider's infrastructure will likely result in your business's (cloud-hosted) applications also experiencing downtime.

Our cloud solutions are largely based on the below:

MICROSOFT CLOUD MANAGED SERVICES

- Microsoft Office 365
- Email setup.
- OneDrive.
- Microsoft Office installations and management.
- SharePoint Online.
- Hybrid configuration and management of Exchange.
- Microsoft Azure
- Configuration and management of servers in the cloud.
- Backup and Site recovery in case of Disaster.
- Security management.
- SQL Data Base
- Power BI

IP PHONE SYSTEM

3CX

- Powerful Hosted Solution
- Scalable communication and grows with your business
- All in on solution
- Remotely managed by us
- Cloud based
